**KENNEDY PROFESSIONAL** Tool Tethers, Lanyards & Accessories

**Any Tool, Tether IT!**

Dropped tools are a major cause of workplace injury and fatalities – most of which could be avoided with the correct tethering and use of tools. Safe use of tools at height begins with the tool tether, which acts as a secure attachment point for lanyards and ultimately tool belts and harnesses. Utilising a patented system developed by Tool@rrest, a pioneering name in the field of tethered tools, Kennedy can Retr@fit almost all new and existing hand tools with a certified, statistically fail-safe tether. This means you can enjoy industry leading tether safety without buying new tools and Retr@fitting can be carried out on your site or in a factory setting in a matter of seconds. And it doesn't stop there. Kennedy can now offer a complete solution to help prevent tools from falling, including securing of the tools-in-waiting (tools in the work belt or holster) and those in active use.

**Lifting Buckets**

Rugged, tested and large enough for multiple tools and applications. With eight internal carabiners stitched in to secure tools-in-waiting. 250mm diameter.

**Safe working load:** 34kg.

**CE Certified with serial number for LOLER traceability.**

**TBB-34C**

Standard bucket with open top.

**TBB-34T**

Toggle drawstring type - recommended for use in situations where untethered fasteners or sockets are being worked with. Closing the drawstring ensures that these loose items are prevented from falling in the event of a bucket tip or drop.

# Socket Set Screws

## QUALFAST Socket Set Screws

High tensile alloy steel. **Grade 14.9.**

### Plain Cup - DIN916

For use against hardened shafts. Ideal for use in ductile castings such as zinc, aluminium etc. where high tightening torques are not practical.

Thread Size	S (hex)
M2	1.0

### Knurled Cup - DIN 916

High tensile alloy steel. Grade 14.9. For quick and permanent location of pulleys, collars and gears on shafts.

Will hold fast even in poorly tapped holes.

Interrupted profile of clamping face resists loosening due to vibration.

Sizes above M6 are generally counterbored to provide maximum clamping efficiency.

### Cone Point - DIN 914

For permanent location of parts. Deep penetration for maximum radial and axial fixing power. Can be used as pivots and where fine adjustment is required.

### Dog Point - DIN 915

For permanent location of one part to another. The point is generally centre spotted and a location hole drilled in the shaft or ground flat where location is made.

### Flat Point - DIN 913

For use where parts are frequently reset. This style of point causes the least amount of damage to the component it locks on to. Can be used against hardened shafts, preferably with a ground flat for improved surface contact. Ideal for use as an adjusting screw and in thin wall thicknesses and on soft plugs.

# Socket Head Countersunk Screws

**QUALFAST**

## Socket Head Countersunk Screws

High Grade Alloy Steel to **BS EN ISO 898/1 Grade 10.9**.  
Suitable for all high tensile applications.  
Maximum operating temperature (unplated): 300°C. For applications that require a flush finished surface.  
Precisely controlled countersink angle allows maximum flushness and sidewall contact.

**Metric:** Dimensions to **DIN 7991**  
**UNC:** Dimensions **BS 2470**

A = Maximum theoretical sharp corner.  
**Inclined angle under head:**  
Up to M20 = 90°  
Above M20 = 60°
